

Exam Prep AI - Revision Plan

Generated on 09 June 2026

HIGH PRIORITY TOPICS:

Divide and Conquer - 8 Hours

Why Important: Frequently asked in PYQs and carries high exam weightage.

Greedy Algorithm - 8 Hours

Why Important: Core algorithm design topic and commonly appears in university examinations.

Dynamic Programming - 8 Hours

Why Important: Frequently asked in PYQs and carries high exam weightage.

Backtracking - 7 Hours

Why Important: Frequently used for problem-solving questions.

Algorithmic Thinking - 6 Hours

Why Important: Essential for problem-solving and appearing in PYQs.

Medium PRIORITY TOPICS:

Recursion - 6 Hours

Why Important: Core concept in algorithm design and appears in university exams.

Divide and Conquer - 5 Hours

Why Important: Important algorithm design paradigm.

Flowchart - 4 Hours

Why Important: Essential for algorithm representation.

Heuristic Approach - 4 Hours

Why Important: Frequently used in problem-solving and appears in PYQs.

Low PRIORITY TOPICS:

Fibonacci Sequence - 2 Hours

Why Important: Less frequently asked but useful for conceptual understanding.

Palindrome - 1 Hour

Why Important: Less frequently asked but useful for conceptual understanding.

Randomized Approach - 1 Hour

Why Important: Less frequently asked but useful for conceptual understanding.

Problem Solving Steps - 1 Hour

Why Important: Essential for problem-solving but less frequently asked.

Final Revision Phase:

- High-priority topics

- Frequently repeated PYQ concepts

- Formulae

- Algorithms
- Important definitions

Last Week Before Exam:

- Review and practice high-priority topics
- Focus on understanding and applying algorithm design paradigms

Last 3 Days Before Exam:

- Focus on high-priority topics and PYQ concepts
- Practice problem-solving and algorithmic thinking
- Review formulae and algorithms

Day Before Exam:

- Quick review of high-priority topics and PYQ concepts
- Focus on relaxation and mental preparation
