

# Exam Prep AI - Revision Plan

Generated on 08 June 2026

## **\*\*Prioritization of Topics\*\***

Based on the provided information, the following topics are prioritized:

### **\*\*High Priority Topics\*\***

1. Problem Solving
2. Algorithm Design
3. Recursion
4. Dynamic Programming
5. Backtracking
6. Greedy Algorithm
7. Brute Force Method
8. Divide and Conquer
9. Memoization
10. Tabulation
11. Algorithm Analysis (Time Complexity, Space Complexity)
12. Code Efficiency
13. Code Optimization
14. Code Review
15. Code Refactoring

These topics are crucial for problem-solving, algorithm design, and code optimization, which are high-weightage modules in the syllabus.

### **\*\*Medium Priority Topics\*\***

1. Data Structures
2. Heuristics
3. Means-Ends Analysis
4. Fibonacci Sequence
5. Palindrome
6. Palindromic Algorithm
7. Number Series
8. Trial and Error Method
9. Jigsaw Puzzle Solving
10. Jigsaw Puzzle Optimization
11. Error Handling
12. System Recovery

13. Password Recovery
14. Sudoku
15. Sudoku Solving
16. Sudoku Backtracking
17. Heuristic Search
18. Optimization Techniques
19. Algorithm Optimization
20. Code Integration
21. Code Deployment
22. Code Testing
23. Code Debugging
24. Code Profiling
25. Code Benchmarking

These topics are essential for problem-solving, algorithm design, and code optimization, but are not as critical as the high-priority topics.

**\*\*Low Priority Topics\*\***

1. Artificial Intelligence
2. Machine Learning
3. Deep Learning
4. Natural Language Processing
5. Computer Vision
6. Robotics
7. Human-Computer Interaction
8. User Experience Design
9. User Interface Design
10. Software Engineering
11. Web Development
12. Database Management
13. Data Mining
14. Data Warehousing
15. Business Intelligence
16. Business Analytics
17. Predictive Analytics
18. Prescriptive Analytics
19. Descriptive Analytics
20. Data Science
21. Data Visualization
22. Data Storytelling

23. Information Retrieval
24. Information Systems
25. Information Technology
26. Computer Networks
27. Network Security
28. Cybersecurity
29. Cryptography
30. Network Administration
31. System Administration
32. Cloud Computing
33. DevOps
34. Continuous Integration
35. Continuous Deployment
36. Continuous Testing
37. Agile Methodology
38. Scrum Framework
39. Kanban Methodology
40. Lean Software Development
41. Test-Driven Development
42. Behavior-Driven Development
43. Pair Programming
44. Code Smells
45. Technical Debt
46. Code Quality
47. Code Maintainability
48. Code Readability
49. Code Reusability
50. Code Scalability
51. Code Security
52. Code Validation
53. Code Verification
54. Code Reliability
55. Code Robustness
56. Code Flexibility
57. Code Adaptability
58. Code Extensibility
59. Code Integrity

- 60. Code Authenticity
- 61. Code Valuation
- 62. Code Worth
- 63. Code Importance
- 64. Code Urgency
- 65. Code Deadlines

These topics are not directly related to the problem-solving, algorithm design, and code optimization, and are therefore considered low-priority.

**\*\*Day-wise Hourly Revision Schedule\*\***

Given 14 days and 4 hours of study per day, the schedule is as follows:

---

### **Day 1-2: High Priority Topics (8 hours/day)**

---

- Day 1: Problem Solving (4 hours), Algorithm Design (4 hours)
- Day 2: Recursion (4 hours), Dynamic Programming (4 hours)

---

### **Day 3-4: High Priority Topics (8 hours/day)**

---

- Day 3: Backtracking (4 hours), Greedy Algorithm (4 hours)
- Day 4: Brute Force Method (4 hours), Divide and Conquer (4 hours)

---

### **Day 5-6: High Priority Topics (8 hours/day)**

---

- Day 5: Memoization (4 hours), Tabulation (4 hours)
- Day 6: Algorithm Analysis (Time Complexity, Space Complexity) (4 hours), Code Efficiency (4 hours)

---

### **Day 7-8: Medium Priority Topics (8 hours/day)**

---

- Day 7: Data Structures (4 hours), Heuristics (4 hours)
- Day 8: Means-Ends Analysis (4 hours), Fibonacci Sequence (4 hours)

---

### **Day 9-10: Medium Priority Topics (8 hours/day)**

---

- Day 9: Palindrome (4 hours), Palindromic Algorithm (4 hours)
- Day 10: Number Series (4 hours), Trial and Error Method (4 hours)

---

### **Day 11-12: Medium Priority Topics (8 hours/day)**

---

- Day 11: Jigsaw Puzzle Solving (4 hours), Jigsaw Puzzle Optimization (4 hours)
- Day 12: Error Handling (4 hours), System Recovery (4 hours)

---

### **Day 13: Low Priority Topics (8 hours)**

---

- Review all low-priority topics, take notes, and make a list of doubts

---

## Day 14: Final Revision (8 hours)

---

- Review all high-priority topics, practice problems, and make a list of doubts
- Focus on problem-solving strategies, algorithm design, and code optimization

### **\*\*Final Revision Phase\*\***

During the final revision phase, focus on:

1. Reviewing and practicing problems from high-priority topics.
2. Focusing on problem-solving strategies, algorithm design, and code optimization.
3. Making a list of doubts and seeking clarification from teachers or peers.
4. Practicing coding exercises and puzzles to improve coding skills.
5. Reviewing and practicing algorithm analysis (time complexity, space complexity) and code efficiency.
6. Making a plan to manage time during the exam and stay focused.

Remember to stay calm, focused, and motivated during the final revision phase. Good luck!
